

THE GAME CHANGERS

Brunswick built a legacy from building the best. If you look inside a Brunswick table, this becomes clear as you see innovation after innovation. Every extra step we take in the building process ensures we achieve superior accuracy and consistency in our tables. We are proud to stand behind every product that carries the Brunswick name, and guarantee the quality, materials and workmanship of our products.

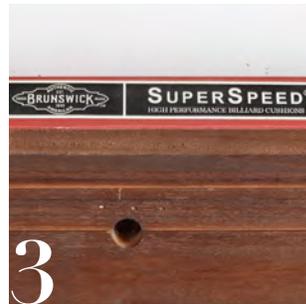

1 HIGH PERFORMANCE™ NUT PLATES

Our exclusive nut plates allow for the application of 70% more torque to each connection, ensuring a solid, seamless transition between rail and slate that enhances performance and playability.

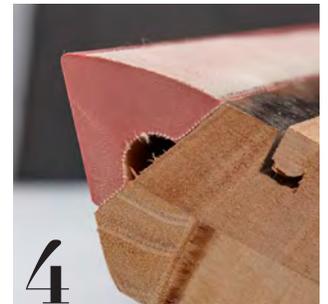

2 HARDENED DOME WASHER

Our hardened dome washer ensures that the rail is gripped directly on the table, providing constant tension, which prevents turning, sinking and loosening over time.

3 SUPERSPEED® CUSHION RUBBER

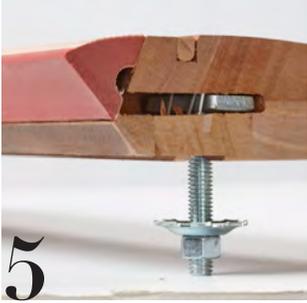

Brunswick SuperSpeed cushions have set the standard for over 70 years. The proprietary rubber formulation provides greater accuracy, control and rail consistency.

4 HIGH PRESSURE BONDING

Precision is critical and cushion rubber bonding and placement are essential to the overall performance. Brunswick achieves superior accuracy and consistency through proprietary pneumatically controlled machines that bond the cushion rubber to the rails for a precision fit that doesn't vary.

ACCURATE NOSE HEIGHT

Banking and rebound accuracy rely on the nose height of the table's cushion rubber. Brunswick's automated, pneumatically controlled machines precisely place the cushion rubber ensuring consistent nose height all around the table that meets the 64% of a 2.3" (5.8 cm) diameter ball standard.

SOLID HARDWOOD RAILS

Brunswick rails are made of solid hardwood. The rails are machined to exacting standards and provide a solid foundation behind the cushion rubber to ensure exceptional accuracy and performance.

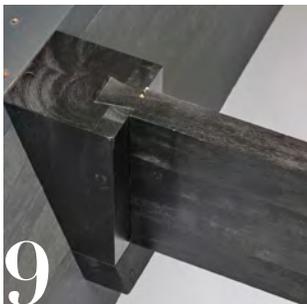

MACHINE RECESSED AREA

Recessed areas machined into the rail allow the rail cloth to be stapled securely many times over and not interfere with the rail attachment to the slate.

STATE-OF-THE-ART FINISHING

Brunswick uses the best materials possible and undergoes the most demanding and time-consuming process to achieve the optimal billiard table finish. From using Polyurethane from world class finish suppliers to conducting a 12-step or more finishing process, Brunswick cuts no corners. The evidence is in the end results... Go Ahead and Feel It!

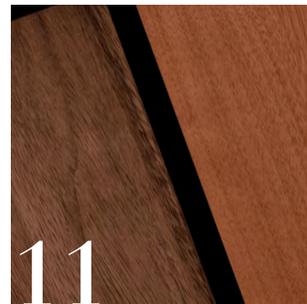

SOLID WOOD DOVETAIL CROSS SUPPORT

Solid wood cross supports utilize dovetail joinery to connect the table frame at each slate joint. This provides superior performance, supporting the slate joints as if the slate was one piece.

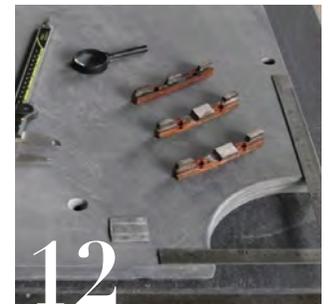

ROCK-SOLID AND READY TO INSTALL

Brunswick tables come ready to assemble. We utilize machine nut and bolt construction and galvanized steel leg-plates to achieve a rock solid fine furniture product that is easy to deliver and install in homes.

KILN-DRIED, STAINED AND SEALED

Brunswick tables are built to last a lifetime. All solid wood materials are kiln-dried to a 6-8% moisture level, then stained and sealed to keep moisture out. A durable furniture finish completes the look of each product, for a lifetime of playability.

BRUNSWICK CERTIFIED SLATE

Our slate is measured to a rigorous standard twice exceeding BCA specification. The slate is precision-machined and leveled to within ten thousandths of an inch, then checked for flatness on each side four times throughout the machining and curing process. Finally, each set is quality inspected and certified for playability.
